Abstract

With 'Family Tree', I intend to allow users to create, collect, organize, visualize, and print their family tree using their phone or computer. This system will help researchers or individuals who are interested in identifying their family tree and their ancestors, know the exact relationship amongst family members, and eliminate the tedious task of searching their name in the family tree book that was previously used to be handwritten. This System will help its users to find, identify, and know details about their relatives. In this work, I intend to build a computerized family tree system.

Notice

This document is intended to demonstrate **conceptual maturity, initiative, and engineering depth**. It **does not necessarily represent final or production-ready product**. It may be **work-in-progress, experimental, or resource-dependent**.

All designs, descriptions, and ideas contained in this document are the **intellectual property (IP) of Gaurav Nyaupane**, unless explicitly stated otherwise. The author acknowledges that some ideas herein may overlap with existing concepts. No exclusivity is claimed over those concepts or methods. However, the specific implementation details, structures, and refinements are original and protected as the author's intellectual property. The reader acknowledges the following terms regarding the use of this document:

- No part of this document may be reproduced, stored, shared, or transmitted in any form or by any means — **electronic, mechanical, photocopying, recording, or otherwise** — without **prior written consent**.
